

My name is Aayushi Gupta and I study Economics, major in Public Finance, at Friedrich Schiller University of Jena. I completed an internship with Dr. Kalliwoda Research GmbH during summer break in 2021. I would like to thank Mr. Kalliwoda for giving me this opportunity to work with you.

I learned constantly about financial markets including equity research, bond research and sustainability analysis. During initial weeks, I was involved in equity research for companies comprising company's valuation using DCF model, SWOT analysis, ratio analysis, market and company research. In the following weeks, I got the chance to work on sustainability project, in which I have a great interest. I educated myself about how to prepare sustainability ratings and also, prepared few of the presentations related to same. Besides, I have been a part of multiple video analyst conferences and meetings with senior executives.

The team has been very supportive and friendly. They guided me through each and every step of this internship. The working environment is very professional as well as friendly. Moreover, one gets enough time to focus on their study along with this internship. There are plethora of opportunities to learn about investment banking and core finance insights. Its a great platform for students who want to grow into finance domain. After the internship, one has comprehensive knowledge about equity analysis and sustainability ratings both in quantitative as well as qualitative dimension. It had been a considerable experience working with Dr. Kalliwoda Research. I would recommend internship with Dr.Kalliwoda Research to those who are interested in financial analysis and wants to flourish in this area.
